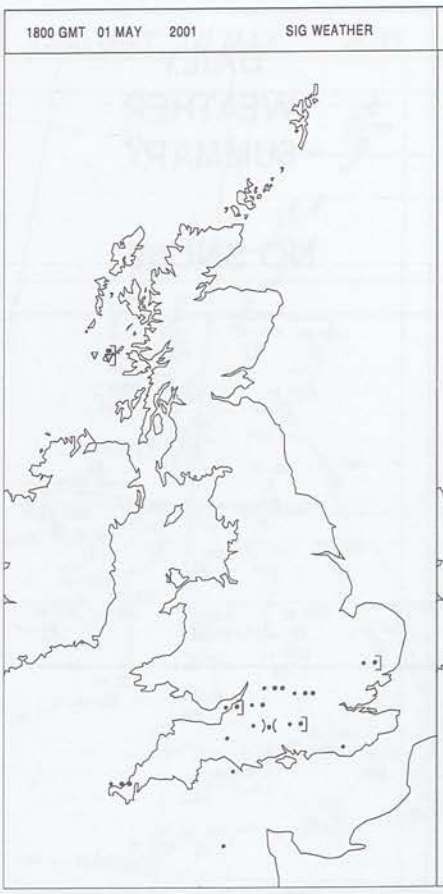
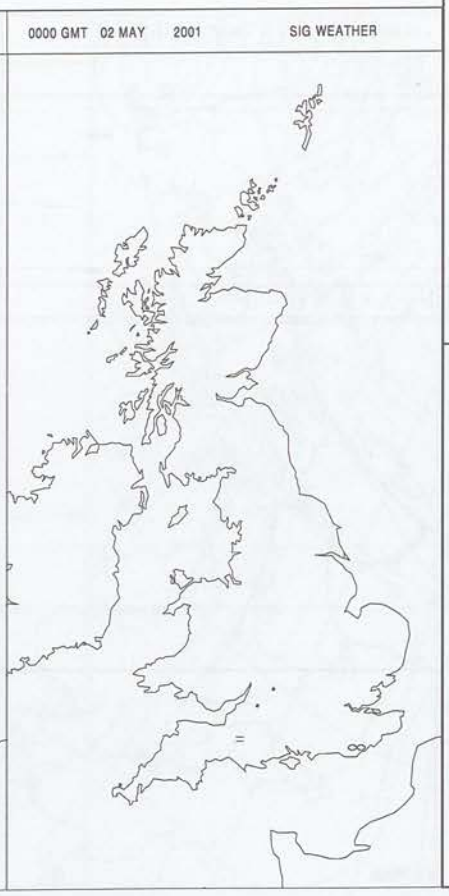
SIGNIFICANT WEATHER





Summary of UK Weather for Tuesday 01 May 2001.

The whole of the British isles started the month of May dry with clear skies in central and most western areas, whilst a veil of cloud and strengthening northeasterly winds affected the southeast. Towards dawn outbreaks of rain spread west across some southern parts but otherwise the country remained dry with some patches of mist, or in the East Midlands and parts of East Anglia, some misty low cloud.

Further pulses of rain spread west across southernmost counties during the morning, whilst at the same time some light rain or drizzle cascaded southeast across the Western Isles and later the Northern Isles.

Most central and northern parts of the British Isles had a fine sunny morning and indeed a fine afternoon, too.

Some heavy pulses of rain had moved onto the south coast by late morning, with these transferring westwards early afternoon but amounts of rain rapidly decreased northwards across the south. At the same time the rain in the far northwest largely died away.

Temperatures were widely rather warm in central and northern areas whist across the south they were rather cool or cool.

EXTREMES

Highest Maximum:
17.8 Pembrey Sands, Dyfed
Lowest Maximum:
8.3 Dunkeswell Aerodrome, Devon
Lowest Minimum:
-3.3 Loch Glascarnoch, Ross & Cromarty
Lowest Grass Minimum:
-6.2 Loch Glascarnoch, Ross & Cromarty
Most Rain:
11.0 Herstmonceux, East Sussex
Most Sun:
14.1 Ronaldsway, Isle Of Man
14.1 Boulmer, Northumberland

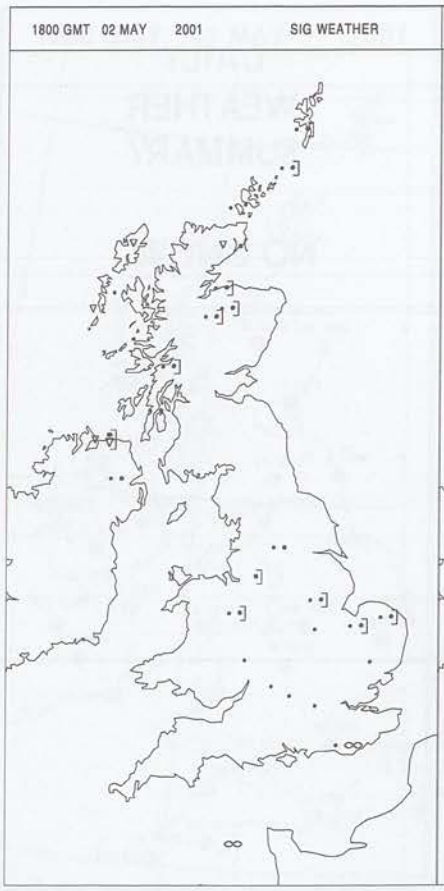
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 02 May 2001.

The night started dry in most areas with variable amounts of cloud, the clearest skies being across central parts of the UK. A few showers affected the extreme south later, and drizzle moved into the Outer Hebrides.

During the day showers broke out more widely across southern England and, later, across East Anglia and the Midlands with some of the showers heavy with thunder. For much of the day northern England, Northern Ireland, central and eastern Scotland were fine and sunny. A band of rain moved southeast across western Scotland during the afternoon, quite heavy at first but weakening quickly as it moved into Northern Ireland and central Scotland by early evening. During the evening some showers drifted north into northern England and lingered for some hours.

Winds were light in most areas but strong and gusty southwesterly in northwest Scotland.

Temperatures ranged from rather cool or near normal in the south and east of England, to warm in Northern Ireland and very warm in many northern parts of England and eastern Scotland.

EXTREMES

Highest Maximum:
20.0 Dyce, Aberdeenshire
Lowest Maximum:
9.3 Machrihanish, Argyll (In Strathcly
Lowest Minimum:

SIGNIFICANT WEATHER

Summary of UK Weather for Thursday 03 May 2001.

Overnight patchy rain, associated with a cold front, affected central areas from North Wales to northeast England. Each side of this front it was generally fine and dry with clear spells.
During the day central southern and southeastern England, along with parts of East Anglia, enjoyed some sunshine for a time before the cloudy skies associated with the front sank south to bring a dull end to the day. A few showery pockets of rain moved across these areas late in the day. Northern England had occasional rain through the day before this cleared away south by evening. After some early fog patches Northern Ireland had a fine and sunny day. In Scotland there was also a good deal of sunshine in some areas throughout the day, but showers developed in the north through the morning and more widely in the afternoon and evening.
Winds were mainly light to moderate northerly .
Temperatures were near normal in much of the country but it was cold in parts of northeast England, whilst sheltered areas along the south coast became rather warm.

EXTREMES

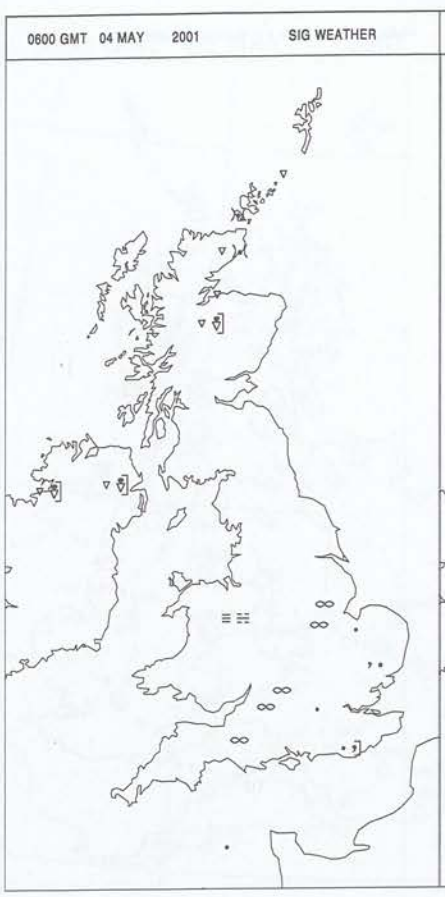
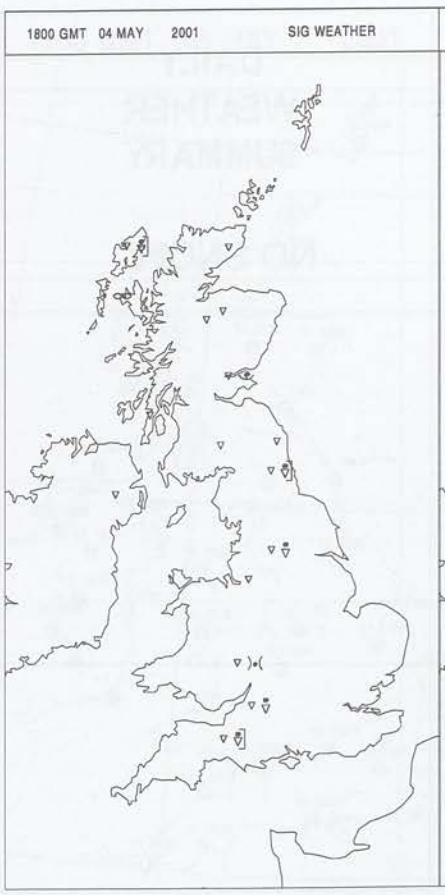
SIGNIFICANT WEATHER





Summary of UK Weather for Friday 04 May 2001.

There were isolated showers across Northern Ireland and in the Northern Isles overnight. Southeastern parts of England were rather cloudy with a little light rain or drizzle in places, but elsewhere it was dry with well broken cloud. A little mist formed in the Midlands.

Northern Ireland had a bright day with some showers. There were some showers across Scotland, mainly in the north and in the Borders, with sunny periods elsewhere. Much of England and Wales stayed dry and largely sunny, although some cloud developed at times. A few showers broke out over northwest England, with some hail reported in Manchester in the morning, as well as across the Midlands down to Wiltshire. Most of the showers petered out in the evening.

Temperatures were close to average over Scotland. Over Northern Ireland, England and Wales it was rather cold.

EXTREMES

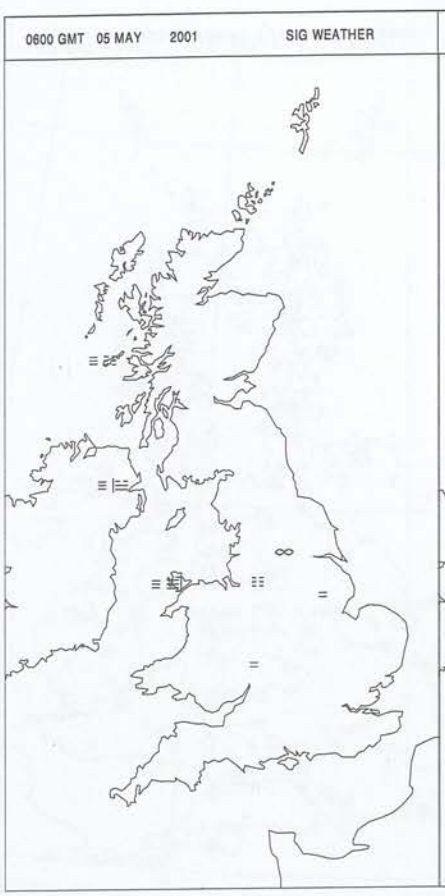
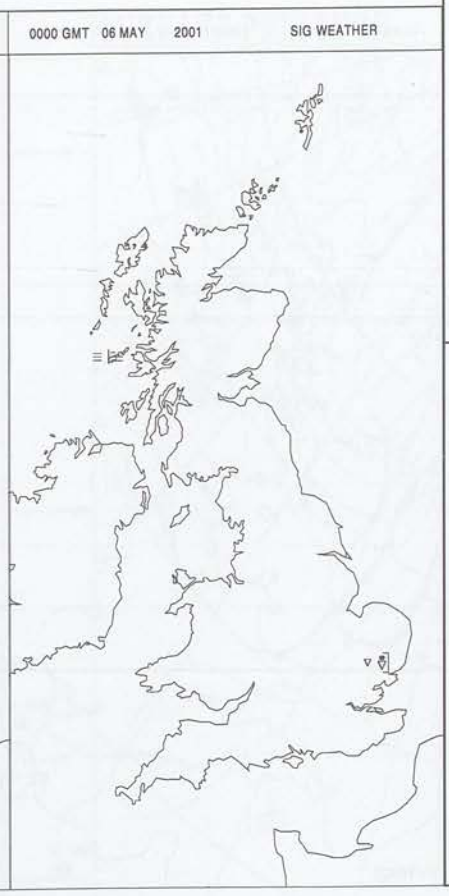
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 05 May 2001.

Northern Ireland had variable cloud overnight and then some fog patches around dawn. Cloud was variable over Scotland but the north and west became mainly cloudy. England and Wales had clear periods and a little mist formed over northwest England.

Northern Ireland had sunny periods and just a few light showers in the north during the first part of the morning. The northwest of Scotland and the Western Isles had a rather cloudy day with some rain and drizzle in places in the evening, and misty low cloud and some light rain affected Shetland by late evening. Elsewhere across Scotland there were sunny periods.

Most of England and Wales had a completely dry day with plenty of sunshine. In the evening some cloud spread into eastern counties and isolated light showers were reported in Suffolk and Norfolk.

Temperatures were close to average over most of England and Wales but it was rather cold across eastern counties. Elsewhere it was mostly rather warm.

SIGNIFICANT WEATHER

Summary of UK Weather for Sunday 06 May 2001.

Apart from patchy drizzle in the Outer Hebrides and over the parts of the Pennines, the early hours were dry with clear periods in many places, although Scotland was largely cloudy with sea fog licking the Hebrides.

The morning saw the cloud break to sunny intervals across much of Scotland, while central and southern England and Wales became fairly cloudy, indeed the odd light shower fell in Oxfordshire. Drizzle was reported in northern Northern Ireland and a shower in the Orkney Isles. Sea fog still lapped the shoreline of some Western Isles.

In the afternoon the whole country was dry with variable amounts of sunshine; the cloud gradually broke up from the northeast in East Anglia and southern England late on. Fog affected Stornoway in the Outer Hebrides and the northern coastline of Northern Ireland.

By dusk clear skies predominated. Southwest England, parts of Wales and western Scotland still had quite a bit of cloud. Fog continued to affect parts of the Outer Hebrides and northern Northern Ireland.

Temperatures were generally normal, however, parts of northern Scotland were warm while the east coast of eastern England was rather cold.

EXTREMES

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 07 May 2001.

The whole of the Great Britain and North Ireland had a dry day.

Sea fog lapped the Outer Hebrides through the early hours, while an air frost occurred in parts of the Borders and the far north of England. The odd fog patch affected North Ireland.

During the morning much of the county was bathed in sunshine, although early low cloud delayed it's appearance in parts of eastern England. Sea fog continued to drift onshore in the Hebrides and along the northern coast of Northern Ireland.

Much of the country was sunny through the afternoon, although low cloud drifted onshore along parts of the north Norfolk coast, while cloud formed to stem the flow of sunshine across central southern England and the Home counties. Sea fog was never far from the coasts of the Outer Hebrides and northwest Scotland.

Many places ended the day with sunshine then clear periods followed dusk.

Temperatures were normal across a large part of the country, however, the east coast of England was rather cold in places, while northern Scotland, away from the east coast, was warm or very warm.

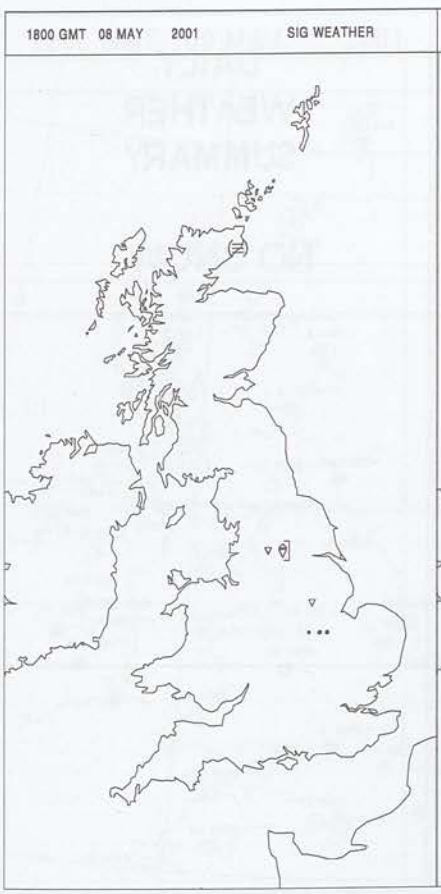
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 08 May 2001.

It was a dry night across all parts with largely clear skies in the southern half of the UK. Over northern Britain there was rather more cloud at times and some mist and fog drifted into some northern coastal areas at times. Mist, fog and low cloud also formed late in the night in parts of East Anglia and the Southeast, this burning off in the strong sunshine soon after dawn. There was a ground frost in many areas with local air frost.

The morning was then dry with a good deal of sunshine in most areas. Some of the Outer Isles around Scotland remained quite cloudy, and clouds built up across central, and parts of northern, England in the afternoon and evening. These brought a scattering of chiefly light showers, the cloud and the showers drifting slowly southwest towards Wales during the evening.

Temperatures ranged from rather cold again along east facing coasts exposed to the light northeast winds, to rather warm in many other areas and very warm in sheltered inland parts of Scotland.

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 09 May 2001.

Heavy showers affected south Wales, the west Midlands and southwest England overnight, with a scattering of showers across East Anglia. Northern England and Northern Ireland had a dry night, as did Scotland, although the east Scottish coast was affected by sea fog.

Showers continued to affect southwestern parts of Wales and southwest England during the morning. By midday a line of sharp showers started to develop across southeast England and these spread westwards during the afternoon. The showers over western parts of Wales and southwest England started to extend northwards into Shropshire and Cheshire by late afternoon. Scotland, Northern Ireland and much of northern England had a dry day with sunny spells.

The evening saw showers continue to affect Wales and southwest England, and these nudged into southern parts of Northern Ireland. Thundery showers started breaking out across Sussex and Kent, but northern England and Scotland remained dry with clear spells.

Across England, Wales and Northern Ireland temperatures were normal in the cloudier areas but rather warm elsewhere. For Scotland the east coast was around normal, but central and western areas were warm or very warm.

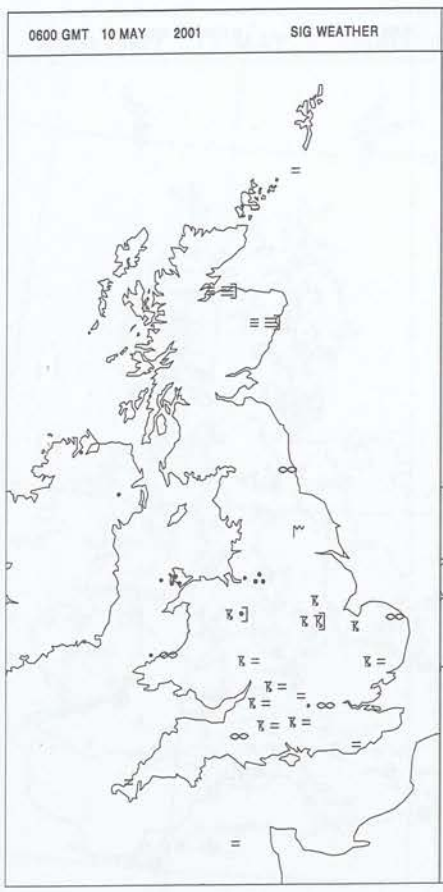
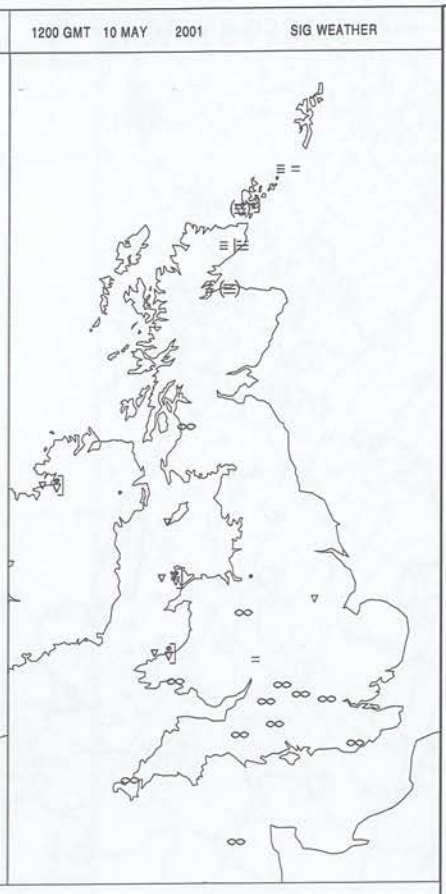
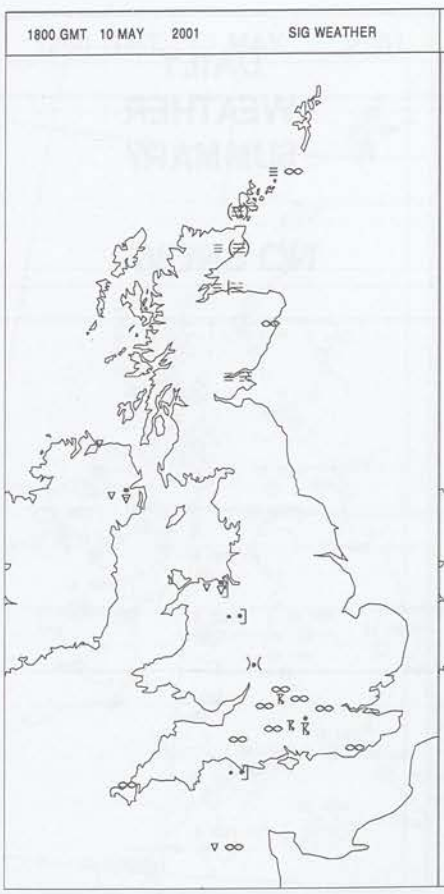
SIGNIFICANT WEATHER







Summary of UK Weather for Thursday 10 May 2001.

During the night showery outbreaks of rain affected Wales, Northern Ireland and parts of SW England. Whilst further across southern England a developing area of heavy and thundery showers, spread slowly north across Wales, the Midlands and East Anglia, to lie approximately Liverpool Bay-Wash by dawn. Reports of hail and spectacular lightning displays. Remaining areas were mostly dry with a mix of low cloud and mist, with a touch of frost across Scotland still.

During the day, Northern Ireland, Wales and western areas of England remained fairly cloudy, but with some good warm spells of sunshine elsewhere. Further showers developed across Northern Ireland, Wales and southern parts of England later, some with thunder. Over Scotland cloudier skies bought some light rain or drizzle After dark scattered thundery showers persisted over Wales and SW England, becoming mainly dry elsewhere. Patchy fog developed around coasts of NE Scotland.

Daytime temperatures ranged from near normal around eastern coasts of England and Scotland, to rather warm across the rest of the UK under the brighter skies. around the northeast coastal fringes.

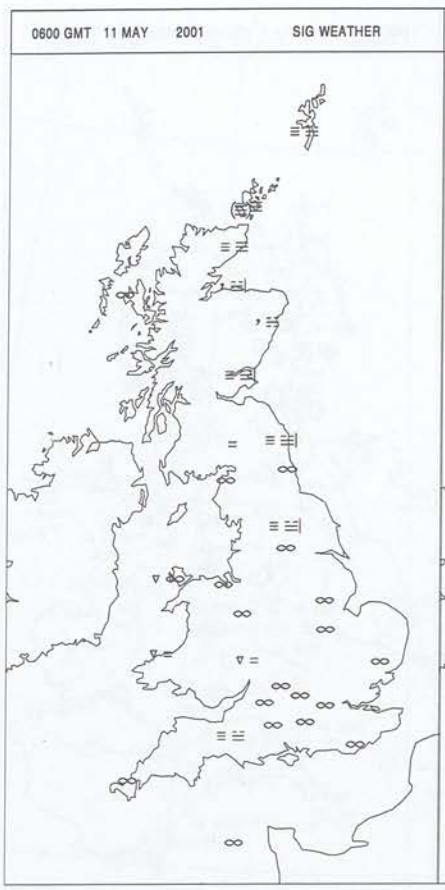
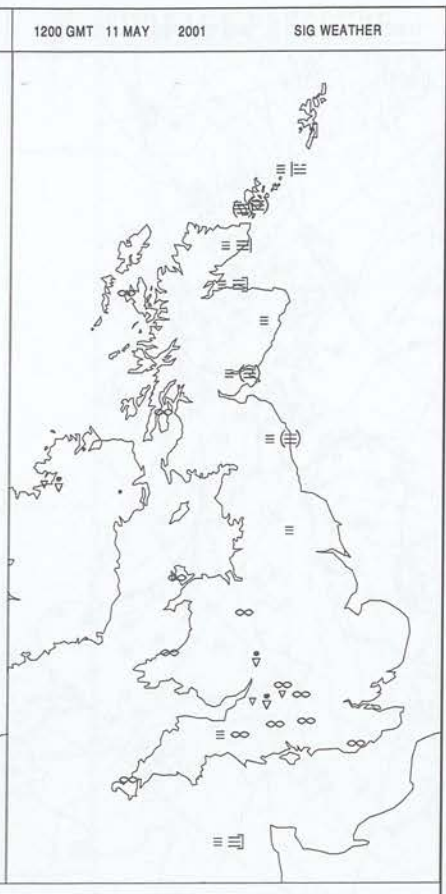
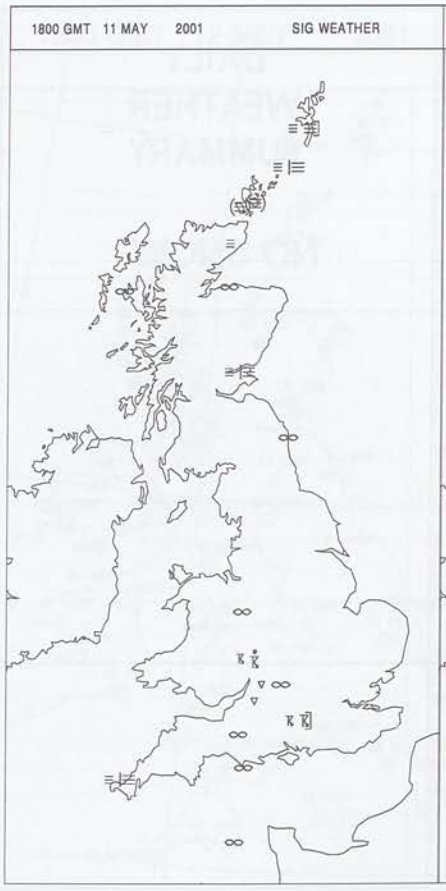
SIGNIFICANT WEATHER







Summary of UK Weather for Friday 11 May 2001.

The night was dry with variable amounts of cloud and clear spells. Much of eastern England was completely clear, but parts of northeast England, eastern and northern Scotland and the northern isles had sea fog or low cloud.

During the day, apart from a few spots of showery rain in the west, mainly over Northern Ireland, the day started dry and bright. In central and eastern England many places had unbroken sunshine, but western England, Wales and Northern Ireland had large amounts of mostly high cloud. Around the coasts of southwest England there was some sea mist. During the afternoon, a thunderstorm developed over east Hampshire with the rapid propagation of storms northwestwards into the west Midlands and central Wales by mid evening. Over Scotland there was a good deal of sunshine but sea fog persisted around the northern isles and from south of Aberdeen to the Lothians. However, around the Moray Firth the fog dispersed.

Most places were warm or very warm, but it was cold where fog persisted.

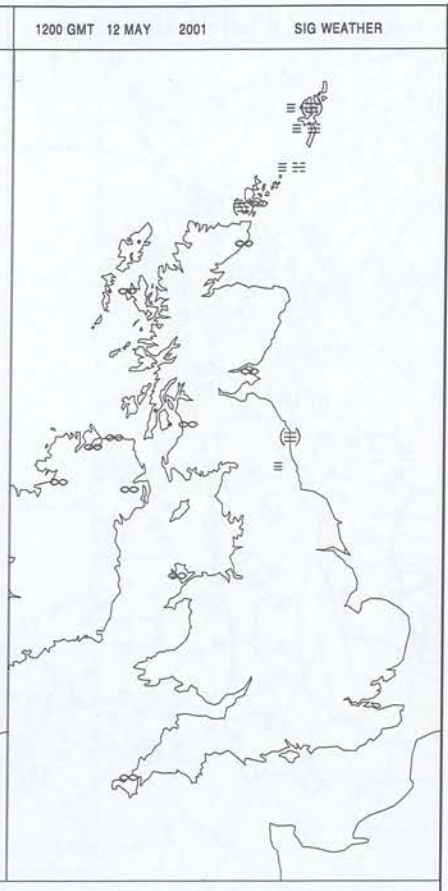
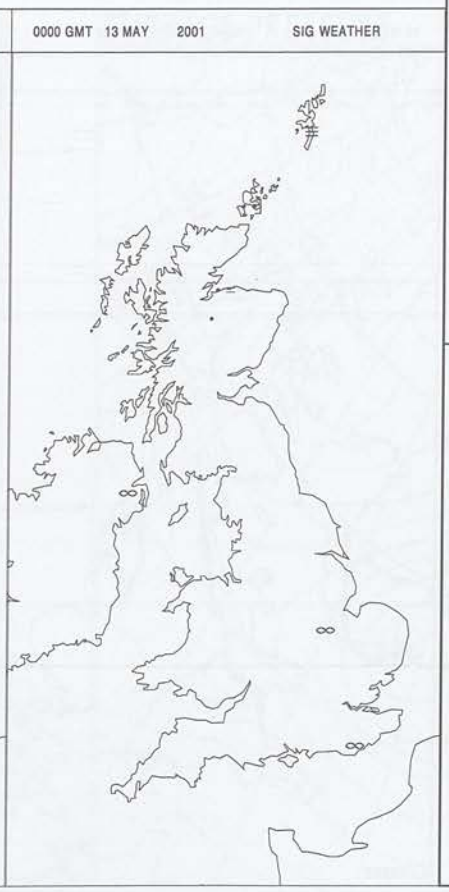
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 12 May 2001.

England had a dry, and mostly clear, night with isolated fog patches forming. Sea fog affected south Cornish coasts. Wales and Northern Ireland were rather cloudy at first but clearer skies spread from the south as the night progressed. Northeast Scotland and the northern isles had sea fog and the western isles had patchy rain but the rest of Scotland was dry with long clear periods.

During the day, England and Wales were dry with long sunny periods, and with most of eastern England having unbroken sunshine. Northern Ireland had variable amounts of cloud and sunny periods. During the late afternoon and evening thundery showers fringed the west of the province. Much of Scotland had a dry day with sunny periods, but cloud built up over the highlands and western Scotland with showers and scattered thunderstorms during the afternoon and early evening. Sea fog over northeast Scotland became confined to the northern isles.

It was generally warm or very warm, but temperatures were near normal near eastern coasts and where sea fog persisted.

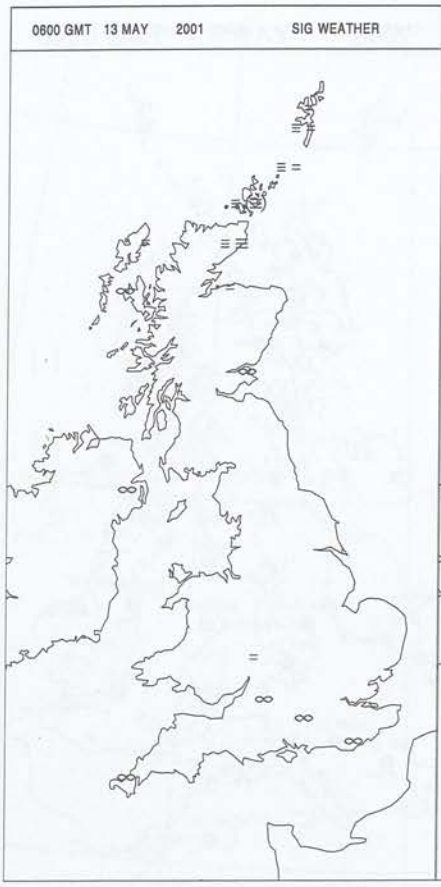
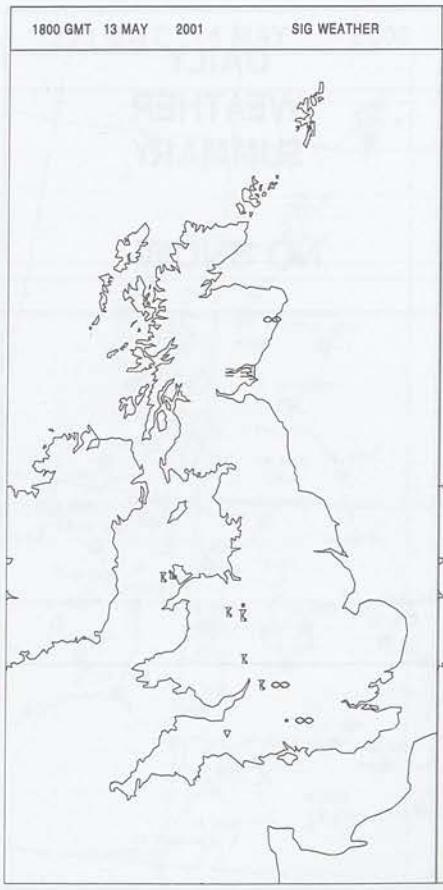
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 13 May 2001.

It was a dry and clear night for most parts, although sea fog affected the Northern Isles and northeasternmost parts of Scotland. Late in the night, high cloud became more evident across southern counties of England and Wales.

The fog tended to lift across the northeast Scotland and the Northern Isles during the morning, but it remained on the cloudy side for much of the day.

Elsewhere, it was a mainly dry and sunny morning. However, increasing cloud across southern parts brought showers to southwest England and south Wales later in the morning and during the early afternoon period. These showers edged across the rest of Wales and the Midlands during the remainder of the afternoon, turning very heavy and thundery as they did so. Northern Ireland, much of Scotland, northern England and East Anglia held onto the sunshine until quite late in the day.

During the evening the thundery showers largely affected north Wales, the Midlands and started to edge into Northern Ireland.

The temperatures were close to normal across southwest England, northernmost parts of Scotland and close to the east coast. Elsewhere, it was very warm.

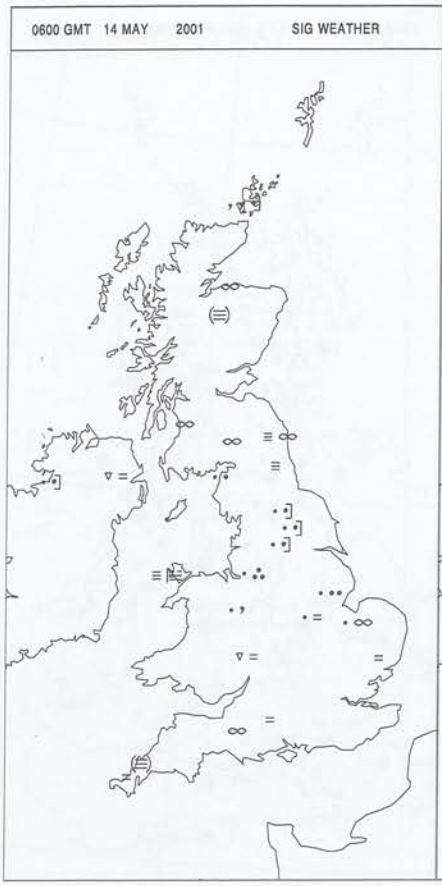
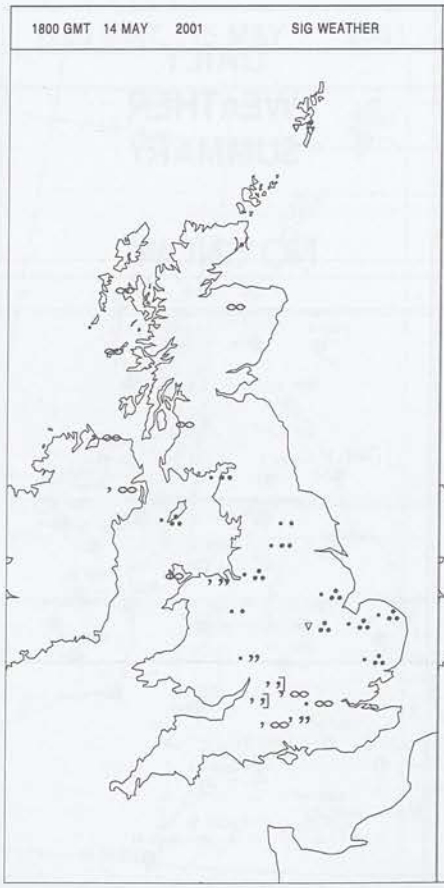
SIGNIFICANT WEATHER





Summary of UK Weather for Monday 14 May 2001.

Overnight, showery rain affected much of Northern Ireland, northwest England and the north Midlands. The rain was heavy and thundery in places. During the latter part of the night, southwesternmost parts of Scotland also saw some rain. Elsewhere it was a largely dry night with variable amounts of the cloud. Misty low cloud affected northeast England and eastern Scotland.

Through the morning, showery rain still affected Northern Ireland, northwest England, the north Midlands and also southwest Scotland. Towards midday, rain also began to move across southeast England and East Anglia. This rain became heavier and more persistent over East Anglia through the afternoon, and then stretched across the north Midlands and northwest England. Wales and the rest of southern England had a largely dry day with southwestern parts seeing plenty of sunshine. Northeast England and the rest of Scotland also had a mainly dry and rather cloudy day.

During the evening, rain, heavy in many places, continued to affect central parts, including north Wales.

The temperatures were generally close to or a little below normal, although parts of the southwest had a very warm day.

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 15 May 2001.

Overnight a band of heavy rain from Norfolk to northwest England and Northern Ireland was slow moving, gradually dying out from the east. To the south there were clear spells and fog patches, to the north it was mostly cloudy but dry.

During the day the rain lingered over Northern Ireland whist drifting slowly north into southern Scotland. Northern Scotland continued mostly dry and cloudy. Central and Southern England along with Wales brightened with sunny periods gradually extending northwards across the area. By mid afternoon scattered showers were developing and through the late afternoon and into the evening these became widespread and heavy with several thunderstorms and some hail. North Wales and parts of north and northeast England missed most of these showers.

Winds were light across the UK, rather variable in direction in the south but mostly between north and east over northern Britain.

Temperatures ranged from cold in most central and northern areas from the North Midlands northwards. Southern areas of England and Wales were near normal to rather warm, but locally warm in the brightest spots.

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 16 May 2001.

The night was cloudy in most areas. Prolonged and at times heavy rain lay across Northern Ireland and much of Scotland, whilst in the south bands of heavy showers moved north from the Channel.

It was an unsettled day in much of the United Kingdom. The persistent rain across Scotland and Northern Ireland gradually became lighter and more patchy with a drier afternoon in some areas, though cloud and rain was never far away. Across the southern half of the UK heavy showers were the order of the day with some local torrential downpours and some thunderstorms, the storms mainly in the eastern half of England. During the late afternoon and evening showers died away across much of the southeast of England, and inland across northern England. However further outbreaks of heavy rain moved into Southwest England and parts of Wales, with rain still affecting parts of Scotland and Northern Ireland.

Winds were fresh and gusty at times, especially near heavier showers and in the southwesterlies in Southeast England.

Temperatures were mainly near normal, rather warm in parts of northern England.

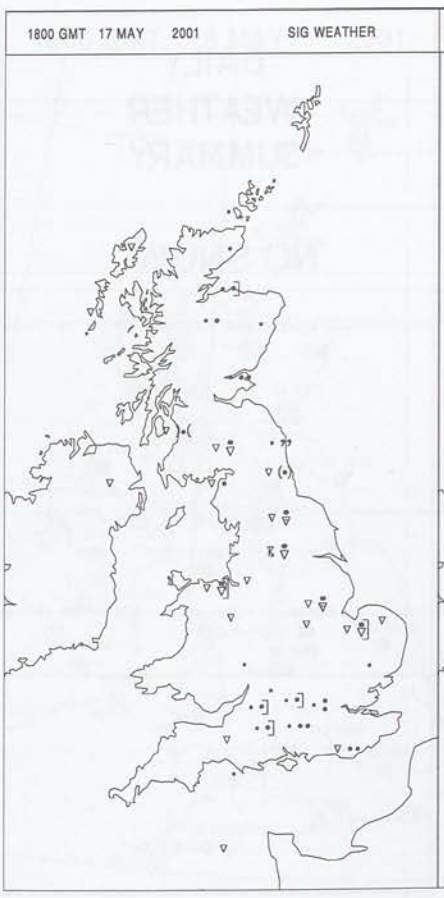
SIGNIFICANT WEATHER



Summary of UK Weather for Thursday 17 May 2001.

Most of the southern half of Britain had some rain overnight, some of it heavy. It became very windy along the Channel coast. Northern Ireland had some rain for a time and there was some rain and drizzle in the far northeast of Scotland.

For much of the southern half of England and Wales it remained cloudy and damp. There were outbreaks of rain, some of them heavy, through most of the day. The south coast was brighter with sunny spells and a few showers and the northern half of England became bright at times but some heavy, thundery showers developed. Most of the rain and showers slowly died out during the evening. It was a windy day in southern areas with a gust of 52 knots at Sheerness in Kent during the afternoon.

In Scotland there were outbreaks of rain in many areas which continued in the southeast into the evening. Northern Ireland was rather cloudy with a few showers.

It was cool or rather cool in most areas but cold in the wetter parts of the south.

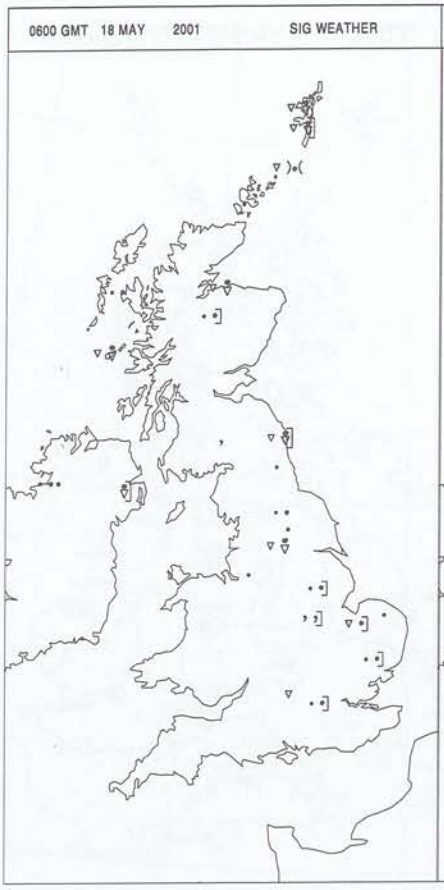
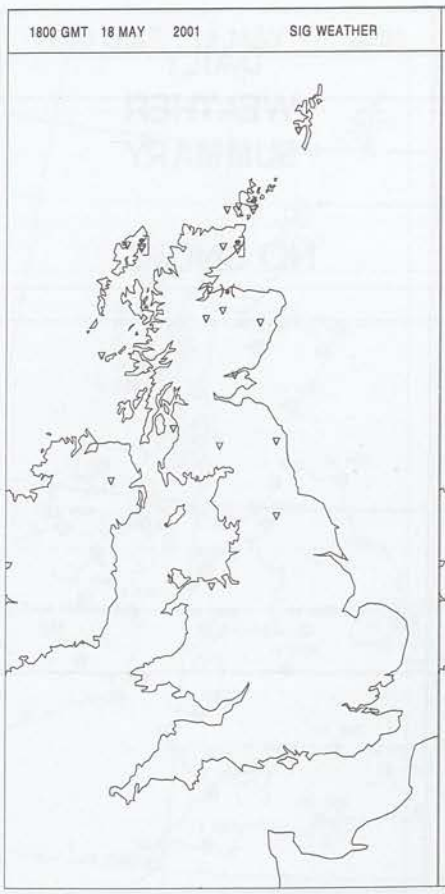
SIGNIFICANT WEATHER





Summary of UK Weather for Friday 18 May 2001.

The Northern Isles and eastern Scotland had some light showers overnight and there was a scattering of showers over Northern Ireland. Over northern England there was some rain and there were the last remnants of the previous evening's showers at first over the south Midlands.

Northern Ireland had a rather cloudy day and there were some showers especially in the morning but some sunshine too. There was some sunshine over Scotland particularly in the south, but it was generally rather cloudy. There were some showers in the Northern Isles and a few showers around coastal regions elsewhere.

Eastern counties of England had a mostly cloudy day with just a few brighter spells and a few light showers, and there were a few showers over northern England in the morning. The south coast had a largely sunny day to the west of Beachy Head and many other parts of England and Wales had at least some sunshine. All parts were dry by evening.

Temperatures were close to average in most places but parts of southeast Scotland were rather warm.

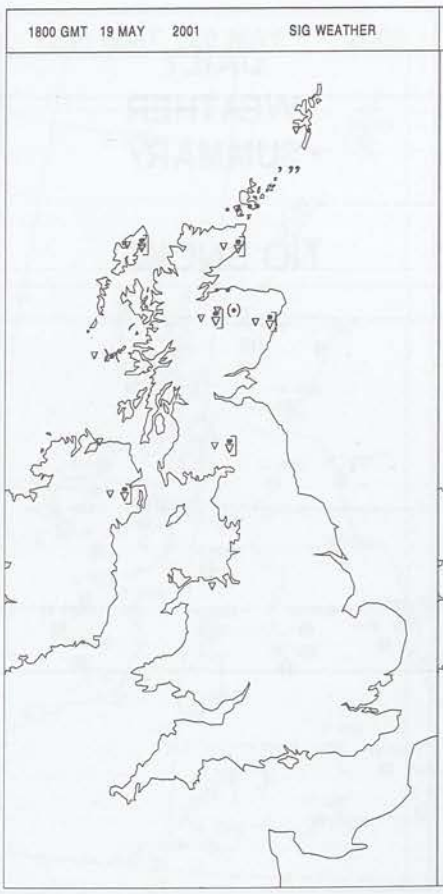
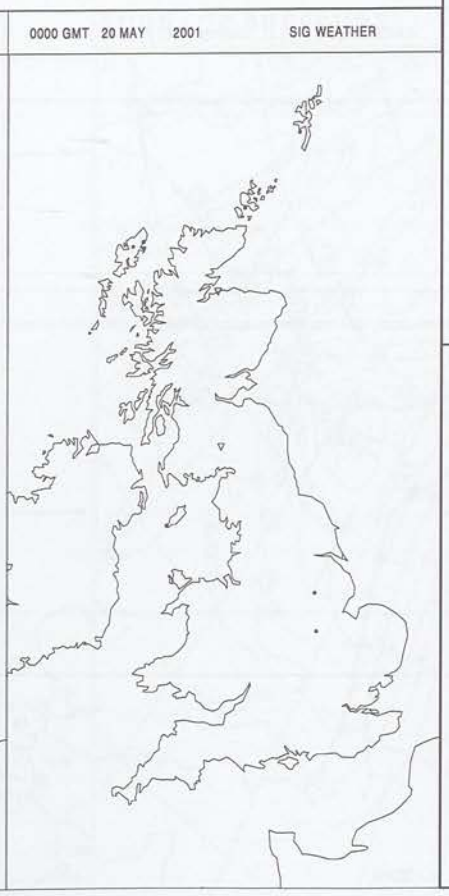
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 19 May 2001.

Most places had a dry night with mainly cloudy skies. There were a few showers in the northeast of Scotland and over Northern Ireland. Mainly clear skies spread south across northeast England and parts of East Anglia by morning.

Northern Ireland had a mainly cloudy day and there were a few light showers in the morning. Over Scotland it was also mainly cloudy, but there were some sunny spells especially in the Shetland Isles and in the Western Isles later. There were some showers too more especially in the north and west.

Over England and Wales it was a mainly cloudy day although some eastern and southern counties had at least some sunshine in the morning, before cloud filled in again. The Channel Islands had a sunny day and there were some sunny periods over west Wales and the far southwest. Most places were dry but there was a little light rain over the Southern Uplands and across northern counties of England in the late afternoon and evening. Some rain reached Norfolk by late evening.

Temperatures were close to average.

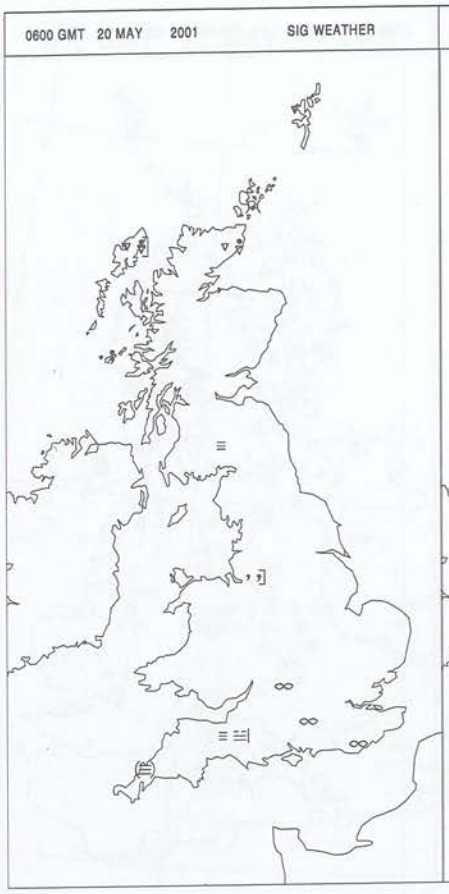
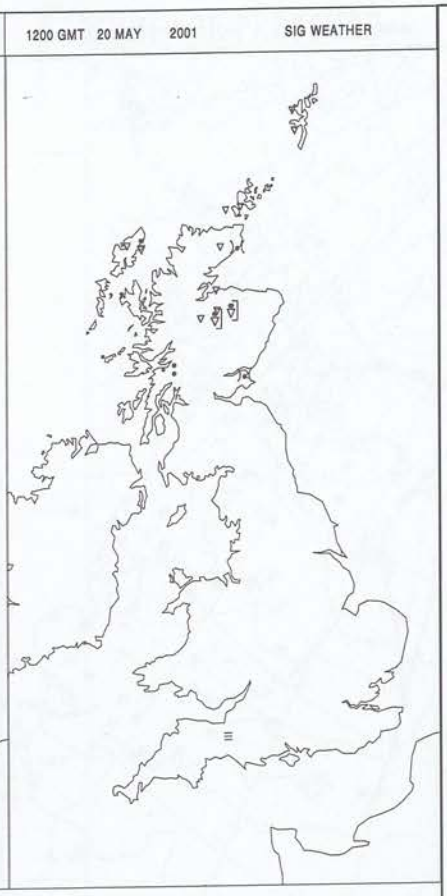
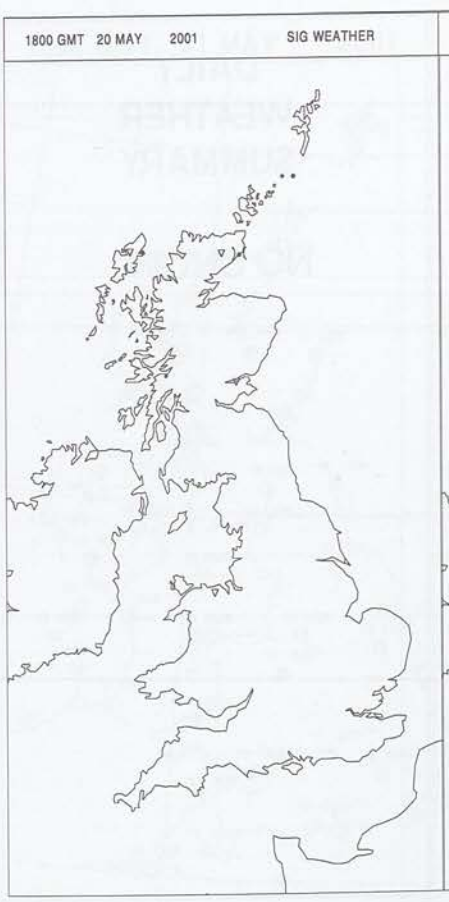
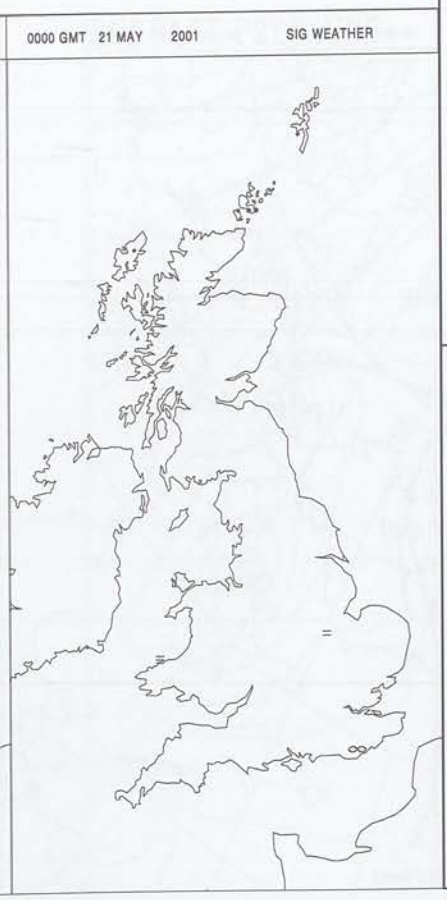
SIGNIFICANT WEATHER









Summary of UK Weather for Sunday 20 May 2001.

Most of the UK enjoyed a dry night courtesy of high pressure, except for a little patchy light rain running across parts of Norfolk and Suffolk during the early hours, due to a weak occlusion clearing away east. There was a lot of cloud across most areas, this also thick enough to give some light rain or drizzle across the Hebrides and Highlands, but with any clearer skies generally running across the southwest of England. Under the clearer skies there was some patchy mist.

During the daytime it stayed mostly dry, with just a few light showers across the northwest of Scotland. Cloud became extensive across most of the UK by midday, with occasional sunshine. However as onshore breezes developed, some coastal areas saw the best of the days sunshine, but with Kent and East Sussex especially enjoying almost unbroken sunshine by late afternoon.

During the evening a warm front bought some rain to Northern Scotland, elsewhere remained dry with some clear spells.

Daytime temperatures ranged from warm to locally rather cool around some coasts due to onshore breezes.

EXTREMES

Highest Maximum:
19.7 Chivenor, Devon
19.7 Great Malvern, Hereford & Worcester

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 21 May 2001.

Apart from some patchy rain in Orkney the whole of the British Isles was dry during the early hours with patchy cloud covering various parts of the United Kingdom. Where skies were clear in central and some southern parts of England some mistiness developed towards dawn with the odd fog patch and some misty low cloud around coast and a little way inland across East Anglia.

During the morning the rain in Orkney spread to Shetland but otherwise dry weather predominated with sunny spells being mostly prevalent from northern England southwards.

Through the afternoon the patchy rain cleared from Shetland and this left all parts dry, with Scotland seeing increasing amounts of sunshine spreading into the south and west. Northern Ireland after a bright morning also saw the best of the sunshine in the afternoon.

Temperatures were mostly warm across Scotland and Northern Ireland, and many parts of England and Wales were warm too, with a few spots in the west hot. However, places exposed to the east to northeast wind were average at best.

EXTREMES

Highest Maximum:
22.4 Carmoney, Londonderry

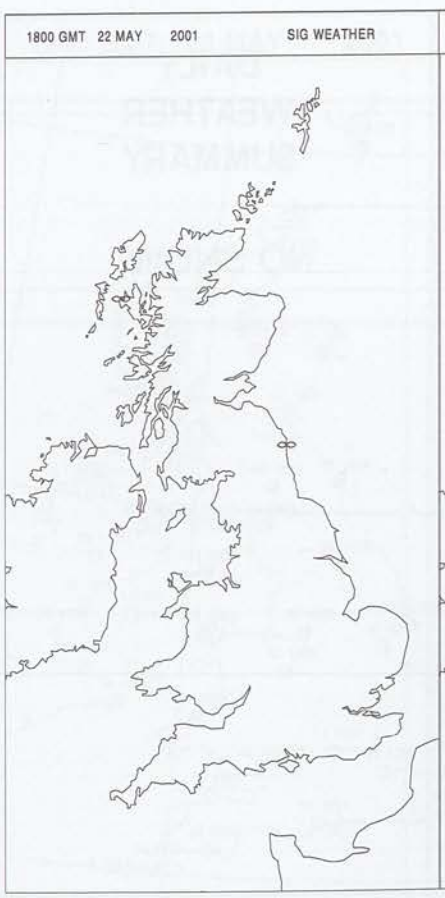
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 22 May 2001.

Through the early hours the cloud across northern mainland Scotland slowly pushed north, whilst that over Lincolnshire moved north and west into parts of Yorkshire and Lancashire. Otherwise the whole country was fine with long clear periods leading to a fine sunrise, although there were a few isolated brief pockets of ground frost in sheltered central and eastern parts.

The whole country had a dry morning with any low cloud which already existed continuing to thin and break up with even some hazy sunshine reaching into Orkney by midday. Shetland remained doggedly cloudy throughout, though.

The afternoon saw a continuation of the cloud clearance over Orkney with elsewhere to the south plenty of sunshine. As yesterday the strength of the east to northeasterly breeze kept places in the east of the country from Lincolnshire southwards rather cooler than places situated further to the west.

Temperatures thus ranged from average or a little below in East Anglia and places close to the southern North Sea, to warm or very warm in central and western areas where a few spots became hot.

EXTREMES

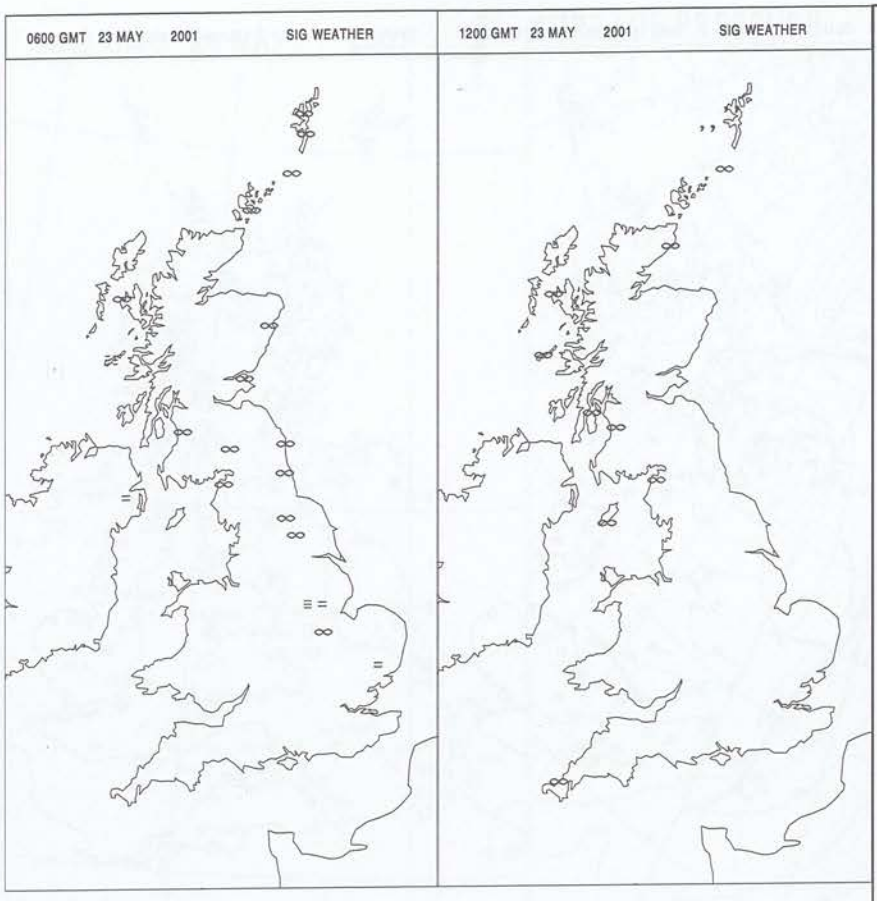
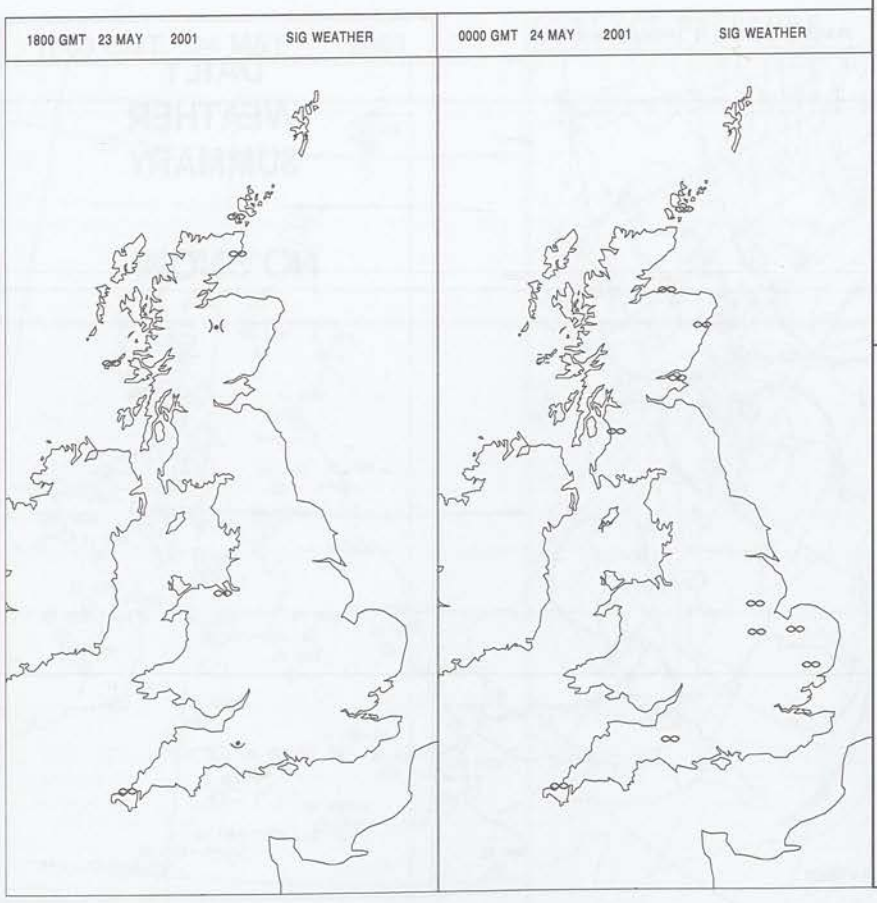
SIGNIFICANT WEATHER





Summary of UK Weather for Wednesday 23 May 2001.

The night was dry everywhere and skies were clear in most places too. Towards morning a few short lived mist and fog patches developed, mainly in East Anglia and northeastern England.

The day saw the dry weather continue across all parts of the country with no significant rainfall recorded anywhere. It was also mostly sunny with very little cloud reported in most region though low cloud returned to Shetland during the afternoon and persisted into the evening, bringing with it just a few spots of drizzle and some misty weather too. High temperatures also caused some clouds to build up across some central parts of Scotland, whilst a band of high cloud turned the sunshine hazy at times in a line from southwest England to northeast England.

Light and variable winds were still moderate northeasterly in the southeast of England depressing temperatures close to the coast. Local onshore seas breezes developed elsewhere. It was rather cool on some east facing coasts, but most places were warm or very warm. It was locally hot, and very hot in inland parts of Scotland.

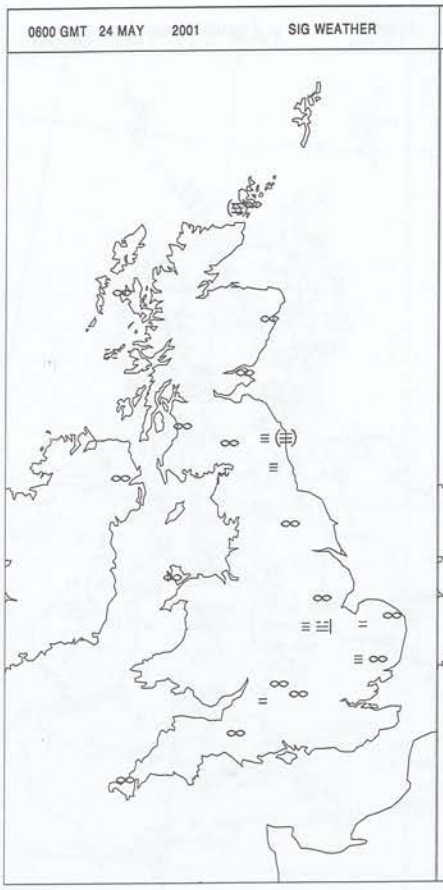
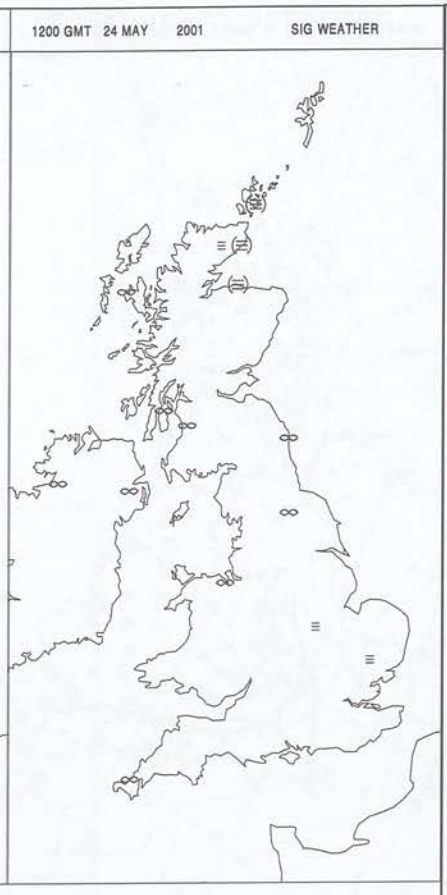
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 24 May 2001.

The night was dry throughout the UK with largely clear skies. Some low cloud across the Northern Isles drifted south down the North Sea into parts of eastern Scotland and Northeast England, with a few patches turning up on the coast of Norfolk. Patchy mist and fog also formed in parts of eastern England.

The day was again dry in all areas with a good deal of sunshine. Areas of high cloud drifted around, patchy in nature in the south but more extensive for a time across Scotland and, late in the day, across Northern Ireland too. Low cloud and mist lingered along the coasts of northeast England, this gradually spilling south to spread into northern parts of East Anglia in the evening.

Winds were mainly light east or northeasterly, moderate at times in the southeast corner.

Temperatures ranged from rather cool along coasts of northeast England affected by the low cloud, to near normal on coasts further south facing the breeze off the North Sea. All remaining areas were warm or very warm, locally hot in sheltered spots.

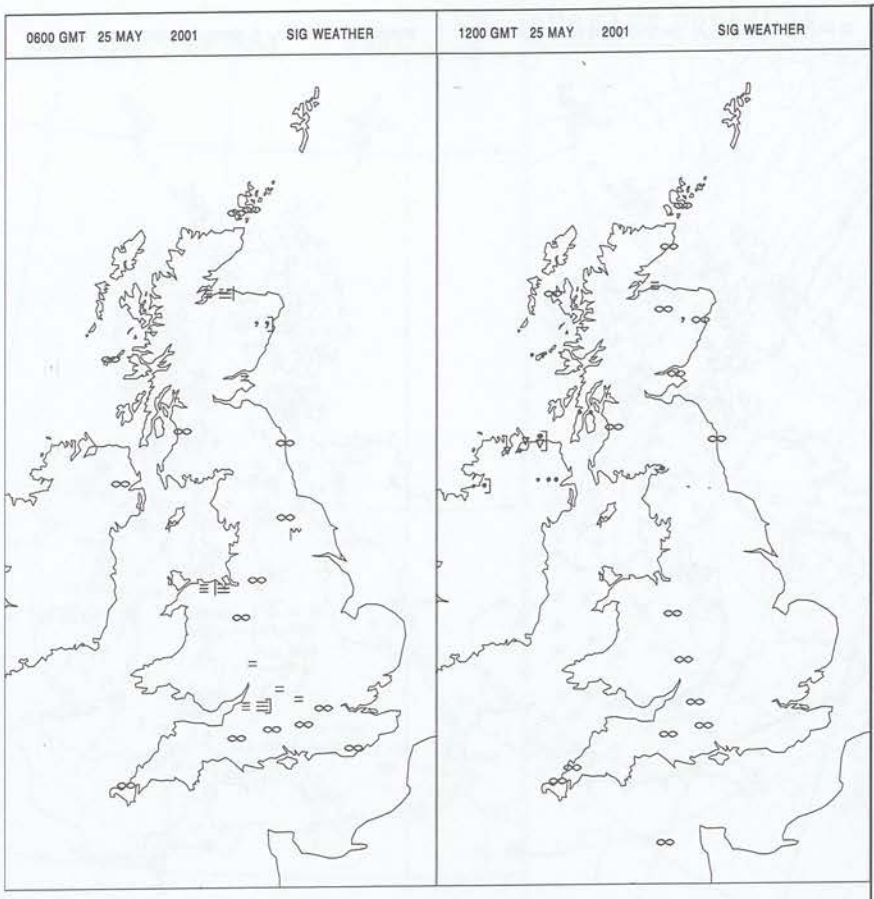
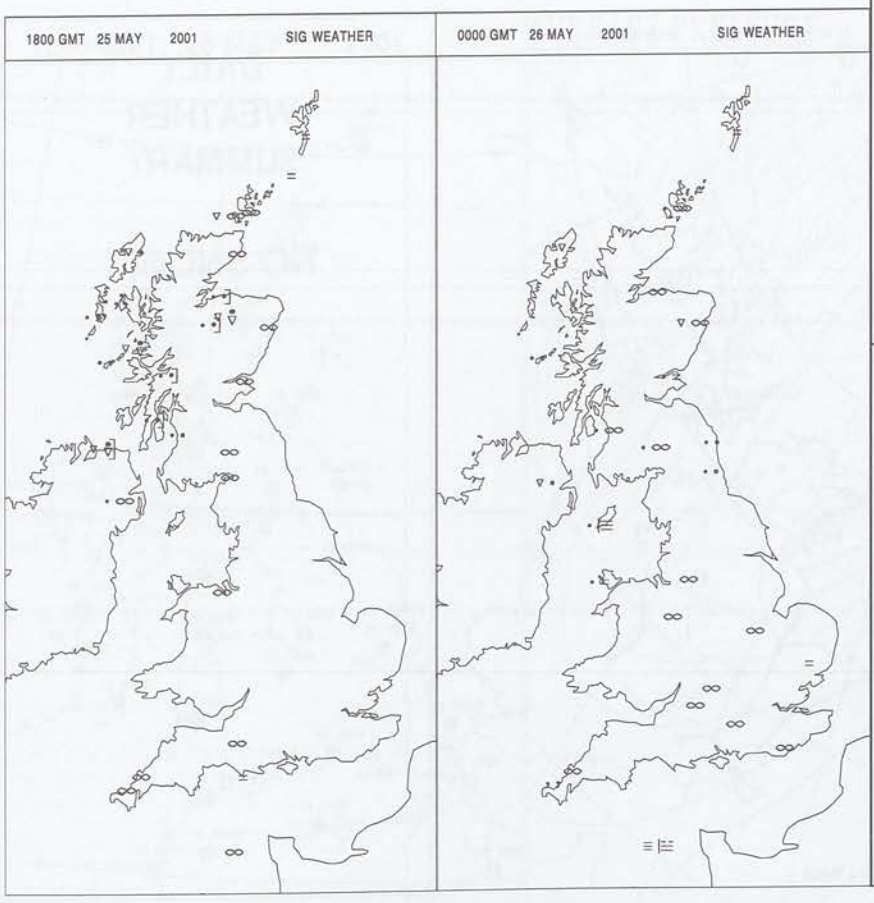
SIGNIFICANT WEATHER





Summary of UK Weather for Friday 25 May 2001.

Overnight was mostly dry. Low cloud and mist rolled inland from North Sea coasts, extending into most central areas by dawn, and into parts of Wales. Across Northern Ireland and other western areas of the UK, skies remained clearer.

During the day England and Wales stayed dry with low cloud breaking to leave some warm sunshine, although turning hazy due to encroaching high cloud. Around the Cornish coast low cloud was more persistent at times with some coastal mist. Northern Ireland turned cloudy with outbreaks of rain during the morning, although becoming brighter and drier again by evening. Over East Scotland the low cloud remained persistent with some patchy drizzle, while cloudier skies drifted in from the west bringing showery outbreaks of rain to all parts. A few sharp showers across the north mainland of Scotland, may have turned thundery.

During the evening most western areas were cloudy with rain extending into the far north of England, and with patchy rain into West Wales.

Temperatures were rather warm in brighter areas, but rather cool around coasts exposed to onshore breezes.

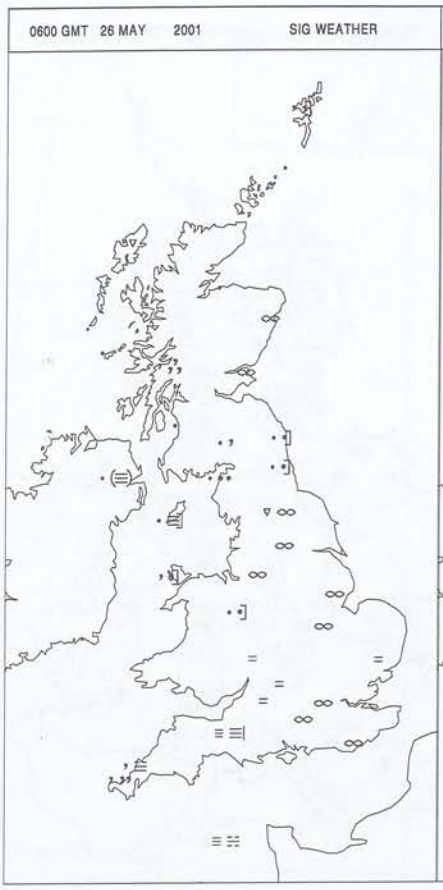
SIGNIFICANT WEATHER



Summary of UK Weather for Saturday 26 May 2001.

There was some drizzle in the east of Northern Ireland overnight and some rain over southern Scotland. Elsewhere across the north of the UK it was rather cloudy. There was some low cloud and drizzle over southwest England, west Wales, on the Isle of Man and the in Channel Islands, with clear spells over the rest of England and Wales.

Northern Ireland had a bright day with some sunshine. There were a few showers over the north and west of Scotland, but most other parts were dry and mainly sunny, after early rain cleared the south.

Low cloud and fog patches affected the English Channel coast as well as west Wales and southwest England for much of the day, but it cleared from the Channel Islands in the morning. There was some drizzle in places. There was some rain over parts of northeast England at first, but elsewhere over England and Wales it was dry and bright with spells of sunshine.

It was warm or very warm in most places but temperatures were close to normal around the cloudier coasts.

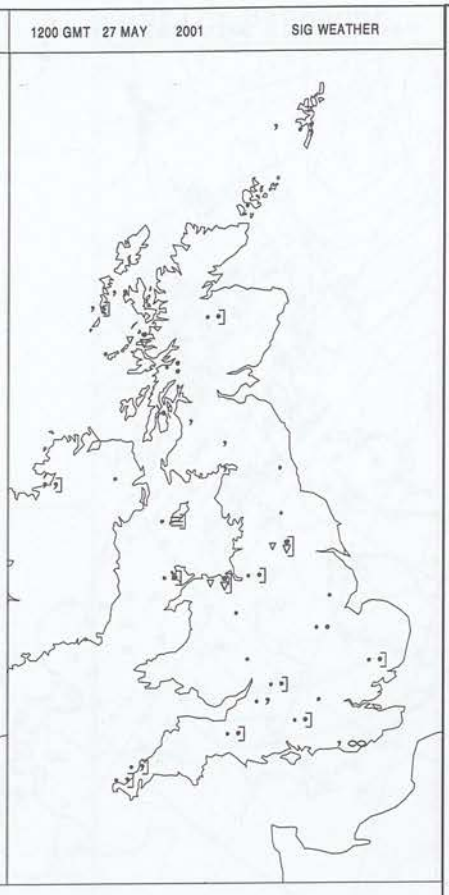
SIGNIFICANT WEATHER



Summary of UK Weather for Sunday 27 May 2001.

Northern Ireland had a cloudy night with a little rain early and late. Northern and western parts of Scotland were cloudy with some light rain in places and the south had drizzle. Much of England and Wales had a cloudy night. There was coastal mist, low cloud and drizzle in the west and then an area of rain spread across Wales, the Midlands and East Anglia.
Northern Ireland had a cloudy day with rain for a time in the afternoon and turned wet again by late evening. Scotland was rather cloudy but the east was bright at times. A band of showery rain spread east through the afternoon, mainly affecting western and central areas. England and Wales also had a mostly cloudy day with western and southern coasts still affected by low cloud, mist and drizzle. There was heavy rain for a time over Wales and further mainly light rain in other parts, mainly the Midlands and East Anglia through the morning. There were some sunny spells in the east.
It was mostly warm or very warm.

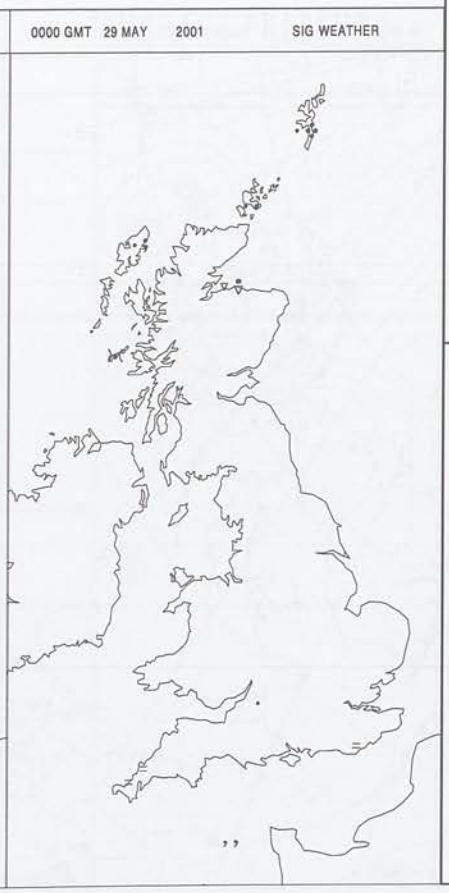
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 28 May 2001.

The overnight period saw a band of rain, locally heavy, spreading across parts of Northern Ireland, southernmost Scotland, northern England and north Wales. There were also lesser outbreaks in the northern isles, and some patchy rain/drizzle in southern England and south Wales, often near windward coasts and hills and accompanied near the coast by fog.

The band of rain across central parts of the UK edged slowly south during the morning. Showery rain continued to affect northern Scotland, but many central and southern parts of both England and Wales were dry and bright. The coastal mist/fog became more patchy. By midday, many western parts of the UK were cloudy with outbreaks of rain/drizzle, but the east was mainly dry and bright. During the afternoon outbreaks of rain extended northeast across Scotland, and a band of light rain spread east across southern parts of the UK, followed by a clearance of the fog patches.

Temperatures were mostly in the warm or very warm categories, especially in areas sheltered from the southwest. The coast of southeast England was rather cool.

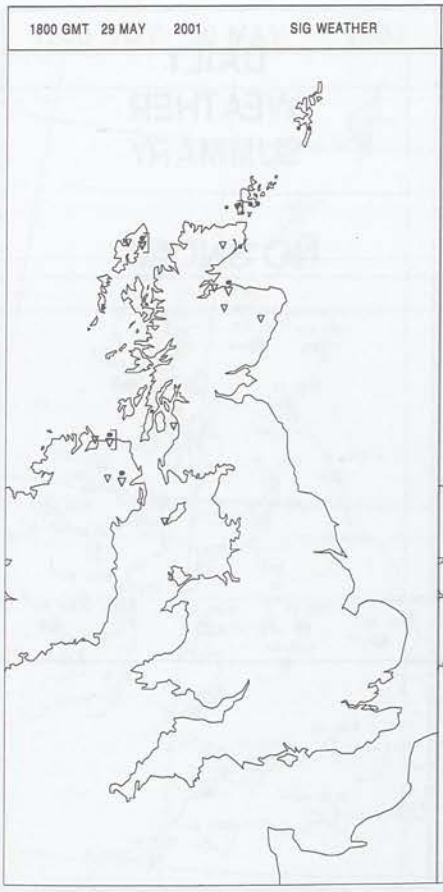
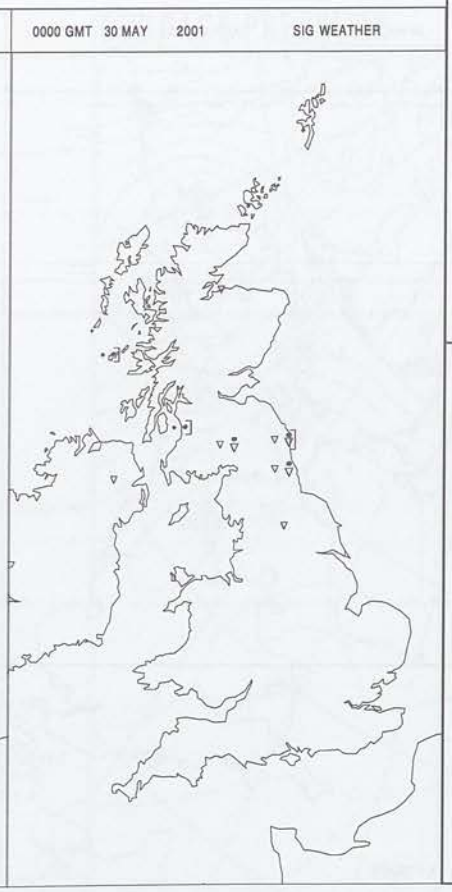
SIGNIFICANT WEATHER





Summary of UK Weather for Tuesday 29 May 2001.

It was a mainly dry but increasingly cloudy night in the east of Scotland, but elsewhere across both Scotland and Northern Ireland it was windy, with a lot of cloud and some showery bursts of rain. England and Wales meanwhile saw a dry and fairly clear night with local mist patches.

There was a mix of bright or sunny spells and showers in Scotland during the day, the showers chiefly light and most prevalent in the north and west, with more general rain at times in the Northern Isles. After a mostly dry and sunny start across Northern Ireland, a rash of showers developed here too, especially towards the evening. It remained dry however, with plenty of hazy sunshine across England and Wales.

There was little in the way of change in the weather into the evening, with showers or more general light rain affecting the north and west of Scotland and much of Northern Ireland, but with the dry and reasonably clear picture continuing across England and Wales.

Temperatures were generally warm or very warm across the British Isles.

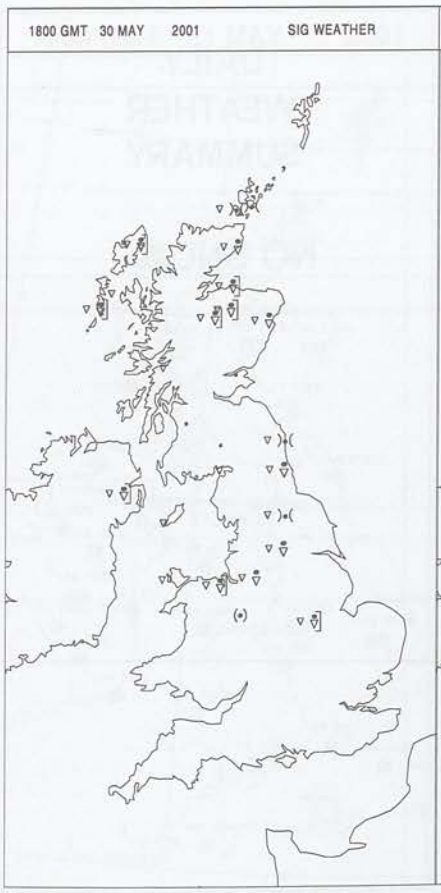
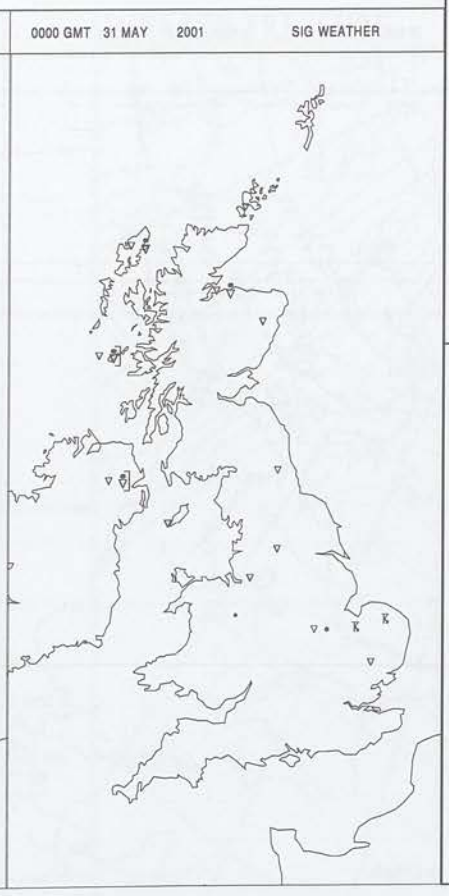
SIGNIFICANT WEATHER





Summary of UK Weather for Wednesday 30 May 2001.

Most of the southern half of the UK was dry and clear overnight with a few brief fog patches around dawn. Central and northern areas were generally more cloudy with showers, with some heavier and longer outbreaks of rain into Northern Ireland towards morning.

During the morning the rain became widespread across northern England and Southern Scotland, heavy at times, with scattered showers to the north and mostly fine, sunny weather to the south. The south of England remained dry and mostly sunny right through the day whilst the rain turned more showery across northern England, Northern Ireland and Scotland. As the area of showers drifted south in the evening into the Midlands it gradually decayed, but over parts of Northeast England and, later, Norfolk scattered thunderstorms developed for a time, drifting away eastwards across the North Sea. Meanwhile scattered showers continued to feed into Scotland and Northern Ireland.

Winds were mainly light northwesterly with some coastal sea breezes.

Most parts of the UK were warm or very warm, but near to normal in parts of Northern Ireland, northern and western Scotland.

SIGNIFICANT WEATHER

Summary of UK Weather for Thursday 31 May 2001.

Overnight, showers affected parts of western Scotland and Northern Ireland. Remaining areas had a dry night with clear spells.

Scattered showers affected Scotland during the day. These were mostly in the west but also developed in the east for a time around the middle of the day. The best of the brightness was in the east with sunny spells. Further west there was a good deal of cloud, especially late in the day, which produced some light rain and drizzle.

Northern Ireland was generally rather cloudy with occasional light rain late in the day.

Much of England and Wales had a dry and bright day with sunny spells. However, showers did develop along the North Sea coast of northeast England late morning, and these edged southwards to affect parts of East Anglia during the afternoon. The showers were locally heavy in the north but became lighter as they headed south.

During the evening, some light rain affected the far northwest, but most other parts remained dry and fine.

The temperatures were generally close to normal.
